Dear Principal,

We would like to welcome your school to apply for the Atlas School Energy Program (ASEP). This program will pay your school electricity costs for 25 years in exchange for the school to complete low-cost energy upgrades, at its discretion.

In many school districts, energy costs are second only to salaries, exceeding the cost of supplies and books. Nationally, K-12 schools spend more than \$6 billion a year on energy and, according to the U.S. Department of Energy, at least a quarter of that could be saved through smarter energy management. Energy improvements could cut the nation's school bill by \$1.5 billion each year.

It is ASEP's goal to substantially reduce the cost of electricity for schools in the San Bernardino area, near our newest solar farm at Harper Lake in Hinkley, California. With our annual dollar-for-dollar credit for your school energy costs, we hope that the school will be able to invest more in books and technology, which will ultimately provide our children with better tools and skills to compete in the global market.

In participating in this program, Atlas Development Group, LLC requires that the school invest in low-cost energy upgrades (at its discretion) to help solve the climate crisis we are facing. According to the National Renewable Energy Laboratory, financing options such as energy savings performance contracts and lease-purchase programs allow schools to make improvements with little or no investment.*

More and more school districts are finding ways to utilize resources from the business community as well. That is why Atlas Development Group, LLC would like to have your school as part of our Atlas School Energy Program (ASEP). Please find the attached application and we look forward to partnering with you to ensure our schools are the best equipped to educate our children for the future.

Thank you,

Clinton Brown
C.E.O. Atlas Development Group, LLC
